

## **The list of services for information support of oil and gas exploration works in the Eastern region of Ukraine has been supplemented.**

UkrSGRI provides information support services for oil and gas exploration in the Eastern region. Relevant maps provide high-quality modeling of the geological environment of the region, contribute to a better study of the geological structure and increase the reliability of oil and gas forecasting in different structural and facies areas, both within regional and local sites. The maps are made in digital format (ARCGIS).
